**Q1 to Q12 have only one correct answer. Choose the correct option to answer your question.**

1. Which of the following is an application of clustering?

- a. Biological network analysis
- b. Market trend prediction
- c. Topic modeling
- d. All of the above

Ans: d)

2. On which data type, we cannot perform cluster analysis?

- a. Time series data
- b. Text data
- c. Multimedia data
- d. None

Ans: d)

3. Netflix's movie recommendation system uses-

- a. Supervised learning
- b. Unsupervised learning
- c. Reinforcement learning and Unsupervised learning
- d. All of the above

Ans: c)

4. The final output of Hierarchical clustering is-

- a. The number of cluster centroids
- b. The tree representing how close the data points are to each other
- c. A map defining the similar data points into individual groups
- d. All of the above

Ans: b)

5. Which of the step is not required for K-means clustering?

- a. A distance metric
- b. Initial number of clusters
- c. Initial guess as to cluster centroids
- d. None

Ans: d)

6. Which of the following is wrong?

- a. k-means clustering is a vector quantization method
- b. k-means clustering tries to group n observations into k clusters
- c. k-nearest neighbour is same as k-means
- d. None

Ans: c)

7. Which of the following metrics, do we have for finding dissimilarity between two clusters in hierarchical clustering?

- i. Single-link
- ii. Complete-link
- iii. Average-link

Options:

---

## MACHINE LEARNING

- a. 1 and 2
- b. 1 and 3
- c. 2 and 3
- d. 1, 2 and 3

Ans: d)

8. Which of the following are true?

- i. Clustering analysis is negatively affected by multicollinearity of features
- ii. Clustering analysis is negatively affected by heteroscedasticity

Options:

- a. 1 only
- b. 2 only
- c. 1 and 2
- d. None of them

Ans: a)

9. In the figure above, if you draw a horizontal line on y-axis for  $y=2$ . What will be the number of clusters formed?

- a. 2
- b. 4
- c. 3
- d. 5

Ans: a)

10. For which of the following tasks might clustering be a suitable approach?

- a. Given sales data from a large number of products in a supermarket, estimate future sales for each of these products.
- b. Given a database of information about your users, automatically group them into different market segments.
- c. Predicting whether stock price of a company will increase tomorrow.
- d. Given historical weather records, predict if tomorrow's weather will be sunny or rainy.

Ans: a)

**Q13 to Q14 are subjective answers type questions, Answers them in their own words briefly**

13. What is the importance of clustering?

Ans: Clustering is important in data analysis and data mining applications. It is the task of grouping a set of objects that objects in the same group are more similar to each other than to those in other groups.

It is essential component and make life so much easier in creating new machine learning methods. It mainly divides many unstructured data sets into clusters and according to the common attributes present in them.

It helps to create more and more clusters.

14. How can I improve my clustering performance?

Ans: Clustering in machine learning is an essential component and makes life so much easier in creating new machine learning methods. It mainly divides many unstructured data sets into clusters and, according to the common attributes present in them, it helps create more and more clusters.

high clustering performance can be achieved by simply performing K-means clustering on the ICA components after PCA dimension reduction on the input data. However, the number of PCA and ICA signals/components needs to be limited to the number of unique classes.
